Outline

Trees, patterns, and rewrite systems

Syntax trees

A set of **letters** is a graded set

$$\mathfrak{G} := \bigsqcup_{n \geq 1} \mathfrak{G}(n)$$

such that each $\mathfrak{G}(n)$ is finite.

Syntax trees

A set of **letters** is a graded set

$$\mathfrak{G} := \bigsqcup_{n \geq 1} \mathfrak{G}(n)$$

such that each $\mathfrak{G}(n)$ is finite.

A **syntax tree** on \mathfrak{G} (called **\mathfrak{G} -tree**) is a planar rooted tree \mathfrak{t} such that each internal node of arity n is labeled by a letter of $\mathfrak{G}(n)$.

Syntax trees

A set of **letters** is a graded set

$$\mathfrak{G} := \bigsqcup_{n \geq 1} \mathfrak{G}(n)$$

such that each $\mathfrak{G}(n)$ is finite.

A **syntax tree** on \mathfrak{G} (called **\mathfrak{G} -tree**) is a planar rooted tree t such that each internal node of arity n is labeled by a letter of $\mathfrak{G}(n)$.

Example

Let $\mathfrak{G} := \mathfrak{G}(2) \sqcup \mathfrak{G}(3)$ such that $\mathfrak{G}(2) = \{a, b\}$ and $\mathfrak{G}(3) = \{c\}$.

Here is a \mathfrak{G} -tree:

Sets of syntax trees

Let \mathcal{G} be a set of letters.

The set of all \mathcal{G} -trees is denoted by $\mathbf{F}(\mathcal{G})$.

Sets of syntax trees

Let \mathcal{G} be a set of letters.

The set of all \mathcal{G} -trees is denoted by $\mathbf{F}(\mathcal{G})$.

For any $t \in \mathbf{F}(\mathcal{G})$, let

- ▶ $|t|$ be the **arity** of t , that is its number of leaves;

Sets of syntax trees

Let \mathcal{G} be a set of letters.

The set of all \mathcal{G} -trees is denoted by $\mathbf{F}(\mathcal{G})$.

For any $t \in \mathbf{F}(\mathcal{G})$, let

- ▶ $|t|$ be the **arity** of t , that is its number of leaves;
- ▶ $\deg(t)$ be the **degree** of t , that is the number of internal nodes of t ;

Sets of syntax trees

Let \mathcal{G} be a set of letters.

The set of all \mathcal{G} -trees is denoted by $\mathbf{F}(\mathcal{G})$.

For any $\mathbf{t} \in \mathbf{F}(\mathcal{G})$, let

- ▶ $|\mathbf{t}|$ be the **arity** of \mathbf{t} , that is its number of leaves;
- ▶ $\deg(\mathbf{t})$ be the **degree** of \mathbf{t} , that is the number of internal nodes of \mathbf{t} ;
- ▶ $a(\mathbf{t})$ be the number of **edges** of \mathbf{t} (satisfying $a(\mathbf{t}) = |\mathbf{t}| + \deg(\mathbf{t})$).

Sets of syntax trees

Let \mathfrak{G} be a set of letters.

The set of all \mathfrak{G} -trees is denoted by $\mathbf{F}(\mathfrak{G})$.

For any $\mathfrak{t} \in \mathbf{F}(\mathfrak{G})$, let

- ▶ $|\mathfrak{t}|$ be the **arity** of \mathfrak{t} , that is its number of leaves;
- ▶ $\deg(\mathfrak{t})$ be the **degree** of \mathfrak{t} , that is the number of internal nodes of \mathfrak{t} ;
- ▶ $a(\mathfrak{t})$ be the number of **edges** of \mathfrak{t} (satisfying $a(\mathfrak{t}) = |\mathfrak{t}| + \deg(\mathfrak{t})$).

We set $\mathbf{F}(\mathfrak{G})(n)$ as the set of the \mathfrak{G} -trees of arity n .

Therefore,

$$\mathbf{F}(\mathfrak{G}) = \bigsqcup_{n \geq 1} \mathbf{F}(\mathfrak{G})(n).$$

Sets of syntax trees

Let \mathfrak{G} be a set of letters.

The set of all \mathfrak{G} -trees is denoted by $\mathbf{F}(\mathfrak{G})$.

For any $\mathfrak{t} \in \mathbf{F}(\mathfrak{G})$, let

- ▶ $|\mathfrak{t}|$ be the **arity** of \mathfrak{t} , that is its number of leaves;
- ▶ $\deg(\mathfrak{t})$ be the **degree** of \mathfrak{t} , that is the number of internal nodes of \mathfrak{t} ;
- ▶ $a(\mathfrak{t})$ be the number of **edges** of \mathfrak{t} (satisfying $a(\mathfrak{t}) = |\mathfrak{t}| + \deg(\mathfrak{t})$).

We set $\mathbf{F}(\mathfrak{G})(n)$ as the set of the \mathfrak{G} -trees of arity n .

Therefore,

$$\mathbf{F}(\mathfrak{G}) = \bigsqcup_{n \geq 1} \mathbf{F}(\mathfrak{G})(n).$$

Remark: since each $\mathfrak{G}(n)$ is finite, if $\mathfrak{G}(1) = \emptyset$, then all $\mathbf{F}(\mathfrak{G})(n)$ are finite.

Partial composition

Let $t, s \in \mathbf{F}(\mathcal{G})$.

For each $i \in [|t|]$, $t \circ_i s$ is the tree obtained by grafting the root of a copy of s onto the i th leaf of t .

Example

Partial composition

Let $\mathbf{t}, \mathbf{s} \in \mathbf{F}(\mathfrak{G})$.

For each $i \in [| \mathbf{t} |]$, $\mathbf{t} \circ_i \mathbf{s}$ is the tree obtained by grafting the root of a copy of \mathbf{s} onto the i th leaf of \mathbf{t} .

Example

Therefore, \circ_i is a map

$$\circ_i : \mathbf{F}(\mathfrak{G})(n) \times \mathbf{F}(\mathfrak{G})(m) \rightarrow \mathbf{F}(\mathfrak{G})(n + m - 1)$$

where $i \in [n]$ and $1 \leq m$, called **partial composition map**.

Complete composition

Let $\mathbf{t}, s_1, \dots, s_{|\mathbf{t}|} \in \mathbf{F}(\mathfrak{G})$.

The $\mathbf{t} \circ [s_1, \dots, s_{|\mathbf{t}|}]$ is obtained by grafting simultaneously the roots of copies of the s_i onto the i th leaves of \mathbf{t} .

Example

Complete composition

Let $\mathbf{t}, \mathfrak{s}_1, \dots, \mathfrak{s}_{|\mathbf{t}|} \in \mathbf{F}(\mathfrak{G})$.

The $\mathbf{t} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_{|\mathbf{t}|}]$ is obtained by grafting simultaneously the roots of copies of the \mathfrak{s}_i onto the i th leaves of \mathbf{t} .

Example

Therefore, \circ is a map

$$\circ : \mathbf{F}(\mathfrak{G})(n) \times \mathbf{F}(\mathfrak{G})(m_1) \times \dots \times \mathbf{F}(\mathfrak{G})(m_n) \rightarrow \mathbf{F}(\mathfrak{G})(m_1 + \dots + m_n)$$

where $1 \leq n$ and $1 \leq m_1, \dots, m_n$, called **complete composition map**.

Patterns and occurrences

Let $t, s \in \mathbf{F}(\mathcal{G})$. A \mathcal{G} -tree t admits an occurrence of a \mathcal{G} -tree s if one can put s onto t by superimposing the root of s and a node of t and leaves of s with leaves of nodes of t .

This property is denoted by $s \preceq t$.

Patterns and occurrences

Let $t, s \in \mathbf{F}(\mathcal{G})$. A \mathcal{G} -tree t admits an occurrence of a \mathcal{G} -tree s if one can put s onto t by superimposing the root of s and a node of t and leaves of s with leaves of nodes of t .

This property is denoted by $s \preceq t$.

Example

Patterns and occurrences

Let $t, s \in \mathbf{F}(\mathfrak{G})$. A \mathfrak{G} -tree t admits an occurrence of a \mathfrak{G} -tree s if one can put s onto t by superimposing the root of s and a node of t and leaves of s with leaves of nodes of t .

This property is denoted by $s \preceq t$.

Example

This relation \preceq endows $\mathbf{F}(\mathfrak{G})$ with the structure of a poset.

Patterns and occurrences

Let $\mathbf{t}, \mathbf{s} \in \mathbf{F}(\mathfrak{G})$. A \mathfrak{G} -tree \mathbf{t} **admits an occurrence** of a \mathfrak{G} -tree \mathbf{s} if one can put \mathbf{s} onto \mathbf{t} by superimposing the root of \mathbf{s} and a node of \mathbf{t} and leaves of \mathbf{s} with leaves of nodes of \mathbf{t} .

This property is denoted by $\mathbf{s} \preceq \mathbf{t}$.

Example

This relation \preceq endows $\mathbf{F}(\mathfrak{G})$ with the structure of a poset.

More formally, $\mathbf{s} \preceq \mathbf{t}$ holds if there exist $\mathbf{r}, \mathbf{r}_1, \dots, \mathbf{r}_{|\mathbf{s}|} \in \mathbf{F}(\mathfrak{G})$ and $i \in [| \mathbf{r} |]$ such that

$$\mathbf{t} = \mathbf{r} \circ_i (\mathbf{s} \circ [\mathbf{r}_1, \dots, \mathbf{r}_{|\mathbf{s}|}]) .$$

Pattern avoidance

Given a set $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$, let $A(\mathcal{P})$ be the set of all \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

Counting the elements of $A(\mathcal{P})$ w.r.t. the arity is a usual question.

Pattern avoidance

Given a set $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$, let $A(\mathcal{P})$ be the set of all \mathfrak{G} -trees **avoiding** all patterns of \mathcal{P} .

Counting the elements of $A(\mathcal{P})$ w.r.t. the arity is a usual question.

Examples

► For $\mathcal{P} := \left\{ \begin{array}{c} | \\ \text{a} \diagup \text{a} \diagdown \\ \text{a} \quad \text{a} \end{array}, \begin{array}{c} | \\ \text{a} \diagup \text{a} \diagdown \\ \text{b} \quad \text{a} \end{array}, \begin{array}{c} | \\ \text{a} \diagup \text{b} \diagdown \\ \text{a} \quad \text{b} \end{array}, \begin{array}{c} | \\ \text{b} \diagup \text{b} \diagdown \\ \text{b} \quad \text{b} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

$$1, 2, 4, 8, 16, 32, 64, 128, \dots ;$$

Pattern avoidance

Given a set $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$, let $A(\mathcal{P})$ be the set of all \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

Counting the elements of $A(\mathcal{P})$ w.r.t. the arity is a usual question.

Examples

► For $\mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{b} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

1, 2, 4, 8, 16, 32, 64, 128, ... ;

► For $\mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

1, 1, 2, 4, 9, 21, 51, 127, ... ;

Pattern avoidance

Given a set $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$, let $A(\mathcal{P})$ be the set of all \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

Counting the elements of $A(\mathcal{P})$ w.r.t. the arity is a usual question.

Examples

► For $\mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{a} \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{b} \quad \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{b} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \quad \text{b} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

1, 2, 4, 8, 16, 32, 64, 128, ... ;

► For $\mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{c} \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{c} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{c} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

1, 1, 2, 4, 9, 21, 51, 127, ... ;

► For $\mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \quad \text{b} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \quad \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \quad \text{b} \end{array} \right\}$, $A(\mathcal{P})$ is enumerated by

1, 2, 5, 13, 35, 96, 167, 750,

Rewrite rules

A **rewrite rule** is a binary relation \rightarrow on $\mathbf{F}(\mathcal{G})$ such that $s \rightarrow s'$ implies $|s| = |s'|$.

Rewrite rules

A **rewrite rule** is a binary relation \rightarrow on $\mathbf{F}(\mathfrak{G})$ such that $s \rightarrow s'$ implies $|s| = |s'|$.

The **rewrite relation induced** by \rightarrow is the binary relation \Rightarrow on $\mathbf{F}(\mathfrak{G})$ satisfying

$$\mathfrak{r} \circ_i (s \circ [\mathfrak{r}_1, \dots, \mathfrak{r}_{|s|}]) \Rightarrow \mathfrak{r} \circ_i (s' \circ [\mathfrak{r}_1, \dots, \mathfrak{r}_{|s|}])$$

if $s \rightarrow s'$, where \mathfrak{r} and $\mathfrak{r}_1, \dots, \mathfrak{r}_{|s|}$ are any \mathfrak{G} -trees.

Rewrite rules

A **rewrite rule** is a binary relation \rightarrow on $\mathbf{F}(\mathfrak{G})$ such that $s \rightarrow s'$ implies $|s| = |s'|$.

The **rewrite relation induced** by \rightarrow is the binary relation \Rightarrow on $\mathbf{F}(\mathfrak{G})$ satisfying

$$\mathbf{r} \circ_i (s \circ [\mathbf{r}_1, \dots, \mathbf{r}_{|s|}]) \Rightarrow \mathbf{r} \circ_i (s' \circ [\mathbf{r}_1, \dots, \mathbf{r}_{|s|}])$$

if $s \rightarrow s'$, where \mathbf{r} and $\mathbf{r}_1, \dots, \mathbf{r}_{|s|}$ are any \mathfrak{G} -trees.

Example

If \rightarrow is the rewrite rule satisfying  \rightarrow , one has

Rewrite systems

Let \rightarrow a rewrite rule on \mathcal{G} -trees and \Rightarrow be the rewrite relation induced by \rightarrow .

Let us define

- ▶ \Rightarrow^* as the reflexive and transitive closure of \Rightarrow ;
- ▶ \Leftrightarrow^* as the reflexive, symmetric, and transitive closure of \Rightarrow .

Rewrite systems

Let \rightarrow a rewrite rule on \mathcal{G} -trees and \Rightarrow be the rewrite relation induced by \rightarrow .

Let us define

- ▶ \Rightarrow^* as the reflexive and transitive closure of \Rightarrow ;
- ▶ \Leftrightarrow^* as the reflexive, symmetric, and transitive closure of \Rightarrow .

A tree t **rewrites** into a tree t' if $t \Rightarrow^* t'$.

Rewrite systems

Let \rightarrow a rewrite rule on \mathfrak{G} -trees and \Rightarrow be the rewrite relation induced by \rightarrow .

Let us define

- ▶ \Rightarrow^* as the reflexive and transitive closure of \Rightarrow ;
- ▶ \Leftrightarrow^* as the reflexive, symmetric, and transitive closure of \Rightarrow .

A tree t **rewrites** into a tree t' if $t \Rightarrow^* t'$.

Two trees t and t' are **linked** if $t \Leftrightarrow^* t'$. Let $\mathbf{F}(\mathfrak{G})/\Leftrightarrow^*$ be the set of all \Leftrightarrow^* -equivalence classes.

Rewrite systems

Let \rightarrow a rewrite rule on \mathfrak{G} -trees and \Rightarrow be the rewrite relation induced by \rightarrow .

Let us define

- ▶ \Rightarrow^* as the reflexive and transitive closure of \Rightarrow ;
- ▶ \Leftrightarrow^* as the reflexive, symmetric, and transitive closure of \Rightarrow .

A tree \mathfrak{t} **rewrites** into a tree \mathfrak{t}' if $\mathfrak{t} \Rightarrow^* \mathfrak{t}'$.

Two trees \mathfrak{t} and \mathfrak{t}' are **linked** if $\mathfrak{t} \Leftrightarrow^* \mathfrak{t}'$. Let $\mathbf{F}(\mathfrak{G})/\Leftrightarrow^*$ be the set of all \Leftrightarrow^* -equivalence classes.

A **normal form** for \Rightarrow is a tree \mathfrak{t} such that $\mathfrak{t} \Rightarrow^* \mathfrak{t}'$ implies $\mathfrak{t} = \mathfrak{t}'$. Let $\mathcal{N}_{\Rightarrow}$ be the set of all normal forms.

Termination and confluence

When there is no infinite chain $t_0 \Rightarrow t_1 \Rightarrow t_2 \Rightarrow \dots$, the rewrite relation \Rightarrow is **terminating**.

Termination and confluence

When there is no infinite chain $t_0 \Rightarrow t_1 \Rightarrow t_2 \Rightarrow \dots$, the rewrite relation \Rightarrow is **terminating**.

When $t \xRightarrow{*} s_1$ and $t \xRightarrow{*} s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **confluent**.

Termination and confluence

When there is no infinite chain $t_0 \Rightarrow t_1 \Rightarrow t_2 \Rightarrow \dots$, the rewrite relation \Rightarrow is **terminating**.

When $t \xRightarrow{*} s_1$ and $t \xRightarrow{*} s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **confluent**.

When $t \Rightarrow s_1$ and $t \Rightarrow s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **locally confluent**.

Termination and confluence

When there is no infinite chain $t_0 \Rightarrow t_1 \Rightarrow t_2 \Rightarrow \dots$, the rewrite relation \Rightarrow is **terminating**.

When $t \xRightarrow{*} s_1$ and $t \xRightarrow{*} s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **confluent**.

When $t \Rightarrow s_1$ and $t \Rightarrow s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **locally confluent**.

Theorem (Diamond property)

If \Rightarrow is terminating and locally confluent, then \Rightarrow is confluent.

Termination and confluence

When there is no infinite chain $t_0 \Rightarrow t_1 \Rightarrow t_2 \Rightarrow \dots$, the rewrite relation \Rightarrow is **terminating**.

When $t \xRightarrow{*} s_1$ and $t \xRightarrow{*} s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **confluent**.

When $t \Rightarrow s_1$ and $t \Rightarrow s_2$ implies the existence of t' such that $s_1 \xRightarrow{*} t'$ and $s_2 \xRightarrow{*} t'$, \Rightarrow is **locally confluent**.

Theorem (Diamond property)

If \Rightarrow is terminating and locally confluent, then \Rightarrow is confluent.

Proposition

Let \rightarrow be a rewrite rule on $\mathbf{F}(\mathfrak{G})$. If \Rightarrow is terminating and confluent, then $\mathcal{N}_{\Rightarrow}$ is

- ▶ the set of all \mathfrak{G} -trees avoiding the left members of \rightarrow ;
- ▶ in a one-to-one correspondence respecting the arities with $\mathbf{F}(\mathfrak{G}) / \xRightarrow{*}$.

1, 1, 2, 4, 8, 14, 20, 19, 16, 14, 14, 15, 16, 17, ...

and its generating function is

$$\frac{t}{(1-t)^2} (1 - t + t^2 + t^3 + 2t^4 + 2t^5 - 7t^7 - 2t^8 + t^9 + 2t^{10} + t^{11}).$$

Outline

Tree series and pattern avoidance

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

A $\mathbf{F}(\mathfrak{G})$ -series (tree series) is a map

$$\mathbf{f} : \mathbf{F}(\mathfrak{G}) \rightarrow \mathbb{K}.$$

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

A $\mathbf{F}(\mathfrak{G})$ -series (tree series) is a map

$$\mathbf{f} : \mathbf{F}(\mathfrak{G}) \rightarrow \mathbb{K}.$$

The coefficient $\mathbf{f}(\mathbf{t})$ of $\mathbf{t} \in \mathbf{F}(\mathfrak{G})$ in \mathbf{f} is denoted by $\langle \mathbf{t}, \mathbf{f} \rangle$.

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

A $\mathbf{F}(\mathfrak{G})$ -series (tree series) is a map

$$\mathbf{f} : \mathbf{F}(\mathfrak{G}) \rightarrow \mathbb{K}.$$

The coefficient $\mathbf{f}(\mathbf{t})$ of $\mathbf{t} \in \mathbf{F}(\mathfrak{G})$ in \mathbf{f} is denoted by $\langle \mathbf{t}, \mathbf{f} \rangle$.

The set of all $\mathbf{F}(\mathfrak{G})$ -series is $\mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle$.

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

A $\mathbf{F}(\mathfrak{G})$ -series (tree series) is a map

$$\mathbf{f} : \mathbf{F}(\mathfrak{G}) \rightarrow \mathbb{K}.$$

The coefficient $\mathbf{f}(\mathbf{t})$ of $\mathbf{t} \in \mathbf{F}(\mathfrak{G})$ in \mathbf{f} is denoted by $\langle \mathbf{t}, \mathbf{f} \rangle$.

The set of all $\mathbf{F}(\mathfrak{G})$ -series is $\mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle$.

Endowed with the pointwise addition

$$\langle \mathbf{t}, \mathbf{f} + \mathbf{g} \rangle := \langle \mathbf{t}, \mathbf{f} \rangle + \langle \mathbf{t}, \mathbf{g} \rangle$$

and the pointwise multiplication by a scalar

$$\langle \mathbf{t}, \lambda \mathbf{f} \rangle := \lambda \langle \mathbf{t}, \mathbf{f} \rangle,$$

the set $\mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle$ is a vector space.

Space of tree series

Let \mathbb{K} be the field $\mathbb{Q}(q_0, q_1, q_2, \dots)$ and \mathfrak{G} be a set of letters.

A $\mathbf{F}(\mathfrak{G})$ -series (tree series) is a map

$$\mathbf{f} : \mathbf{F}(\mathfrak{G}) \rightarrow \mathbb{K}.$$

The coefficient $\mathbf{f}(\mathbf{t})$ of $\mathbf{t} \in \mathbf{F}(\mathfrak{G})$ in \mathbf{f} is denoted by $\langle \mathbf{t}, \mathbf{f} \rangle$.

The set of all $\mathbf{F}(\mathfrak{G})$ -series is $\mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle$.

Endowed with the pointwise addition

$$\langle \mathbf{t}, \mathbf{f} + \mathbf{g} \rangle := \langle \mathbf{t}, \mathbf{f} \rangle + \langle \mathbf{t}, \mathbf{g} \rangle$$

and the pointwise multiplication by a scalar

$$\langle \mathbf{t}, \lambda \mathbf{f} \rangle := \lambda \langle \mathbf{t}, \mathbf{f} \rangle,$$

the set $\mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle$ is a vector space.

The sum notation of \mathbf{f} is

$$\mathbf{f} = \sum_{\mathbf{t} \in \mathbf{F}(\mathfrak{G})} \langle \mathbf{t}, \mathbf{f} \rangle \mathbf{t}.$$

Some tree series

Example

For $x \in \mathfrak{G}$, let \mathbf{f}_x be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_x \rangle$ is the number of occurrences of x in \mathbf{t} . For instance,

$$\mathbf{f}_a = \begin{array}{c} | \\ a \\ / \quad \backslash \end{array} + 2 \begin{array}{c} | \\ a \\ / \quad \backslash \\ a \quad \backslash \end{array} + \begin{array}{c} | \\ a \\ / \quad \backslash \\ b \quad \backslash \end{array} + \begin{array}{c} | \\ a \\ / \quad \backslash \\ \quad b \end{array} + 2 \begin{array}{c} | \\ a \\ / \quad \backslash \\ \quad a \end{array} + 3 \begin{array}{c} | \\ a \\ / \quad \backslash \\ a \quad a \end{array} + \cdots .$$

Some tree series

Example

For $x \in \mathfrak{G}$, let \mathbf{f}_x be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_x \rangle$ is the number of occurrences of x in \mathbf{t} . For instance,

$$\mathbf{f}_a = \begin{array}{c} | \\ \wedge \\ a \end{array} + 2 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + \begin{array}{c} | \\ \wedge \\ b \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ b \end{array} + 2 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + 3 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + \cdots .$$

Example

Let \mathbf{f}_1 be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_1 \rangle := |\mathbf{t}|$. Hence,

$$\mathbf{f}_1 = 1 + 2 \begin{array}{c} | \\ \wedge \\ a \end{array} + 2 \begin{array}{c} | \\ \wedge \\ b \end{array} + 3 \begin{array}{c} | \\ \wedge \\ c \end{array} + 3 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + 3 \begin{array}{c} | \\ \wedge \\ b \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + 3 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ b \end{array} + 3 \begin{array}{c} | \\ \wedge \\ a \end{array} \begin{array}{c} | \\ \wedge \\ a \end{array} + \cdots .$$

Some tree series

Example

For $x \in \mathfrak{G}$, let \mathbf{f}_x be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_x \rangle$ is the number of occurrences of x in \mathbf{t} . For instance,

$$\mathbf{f}_a = \begin{array}{c} | \\ \wedge \\ a \end{array} + 2 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & \end{array} \end{array} + \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} b & \end{array} \end{array} + \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & b \end{array} \end{array} + 2 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & a \end{array} \end{array} + 3 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & a \end{array} \end{array} + \cdots .$$

Example

Let \mathbf{f}_1 be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_1 \rangle := |\mathbf{t}|$. Hence,

$$\mathbf{f}_1 = 1 + 2 \begin{array}{c} | \\ \wedge \\ a \end{array} + 2 \begin{array}{c} | \\ \wedge \\ b \end{array} + 3 \begin{array}{c} | \\ \wedge \\ c \end{array} + 3 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & \end{array} \end{array} + 3 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} b & \end{array} \end{array} + 3 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & b \end{array} \end{array} + 3 \begin{array}{c} | \\ \wedge \\ \begin{array}{cc} a & a \end{array} \end{array} + \cdots .$$

Example

In the tree series $\mathbf{f}_a + \mathbf{f}_b + \mathbf{f}_c$, the coefficient of a tree is its degree.

Some tree series

Example

For $x \in \mathfrak{G}$, let \mathbf{f}_x be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_x \rangle$ is the number of occurrences of x in \mathbf{t} . For instance,

$$\mathbf{f}_a = \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} + 2 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + \begin{array}{c} | \\ \diagup \diagdown \\ b \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ b \end{array} \end{array} + 2 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + \cdots .$$

Example

Let \mathbf{f}_1 be the $\mathbf{F}(\mathfrak{G})$ -series wherein $\langle \mathbf{t}, \mathbf{f}_1 \rangle := |\mathbf{t}|$. Hence,

$$\mathbf{f}_1 = 1 + 2 \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} + 2 \begin{array}{c} | \\ \diagup \diagdown \\ b \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ c \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ b \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ b \end{array} \end{array} + 3 \begin{array}{c} | \\ \diagup \diagdown \\ a \begin{array}{c} | \\ \diagup \diagdown \\ a \end{array} \end{array} + \cdots .$$

Example

In the tree series $\mathbf{f}_a + \mathbf{f}_b + \mathbf{f}_c$, the coefficient of a tree is its degree.

In the tree series $\mathbf{f}_1 + \mathbf{f}_a + \mathbf{f}_b + \mathbf{f}_c$, the coefficient of a tree is its number of edges.

Evaluation and generating series

Let \mathcal{S} be a set of \mathfrak{G} -trees.

The **characteristic series** of \mathcal{S} is the $\mathbf{F}(\mathfrak{G})$ -série

$$\mathbf{f}_{\mathcal{S}} := \sum_{t \in \mathcal{S}} t.$$

Evaluation and generating series

Let \mathcal{S} be a set of \mathfrak{G} -trees.

The **characteristic series** of \mathcal{S} is the $\mathbf{F}(\mathfrak{G})$ -série

$$\mathbf{f}_{\mathcal{S}} := \sum_{\mathbf{t} \in \mathcal{S}} \mathbf{t}.$$

The **evaluation** map

$$\mathrm{ev} : \mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle \rightarrow \mathbb{K} \langle \langle t \rangle \rangle$$

is the linear map satisfying

$$\mathrm{ev}(\mathbf{t}) = t^{|\mathbf{t}|}.$$

Evaluation and generating series

Let \mathcal{S} be a set of \mathfrak{G} -trees.

The **characteristic series** of \mathcal{S} is the $\mathbf{F}(\mathfrak{G})$ -série

$$\mathbf{f}_{\mathcal{S}} := \sum_{\mathbf{t} \in \mathcal{S}} \mathbf{t}.$$

The **evaluation** map

$$\text{ev} : \mathbb{K} \langle \langle \mathbf{F}(\mathfrak{G}) \rangle \rangle \rightarrow \mathbb{K} \langle \langle t \rangle \rangle$$

is the linear map satisfying

$$\text{ev}(\mathbf{t}) = t^{|\mathbf{t}|}.$$

One has

$$\text{ev}(\mathbf{f}_{\mathcal{S}}) = \sum_{\mathbf{t} \in \mathcal{S}} t^{|\mathbf{t}|} = \sum_{n \geq 1} \# \{ \mathbf{t} \in \mathcal{S} : |\mathbf{t}| = n \} t^n = \mathcal{G}_{\mathcal{S}}(t)$$

where $\mathcal{G}_{\mathcal{S}}(t)$ is the generating series of \mathcal{S} , enumerating its elements w.r.t. the arity.

Composition of tree series

The **composition** of the $\mathbf{F}(\mathfrak{G})$ -series \mathbf{f} and $\mathbf{g}_1, \dots, \mathbf{g}_n$ is the series

$$\mathbf{f} \circ [\mathbf{g}_1, \dots, \mathbf{g}_n] := \sum_{\substack{\mathbf{t} \in \mathbf{F}(\mathfrak{G})(n) \\ s_1, \dots, s_n \in \mathbf{F}(\mathfrak{G})}} \left(\langle \mathbf{t}, \mathbf{f} \rangle \prod_{i \in [n]} \langle s_i, \mathbf{g}_i \rangle \right) \mathbf{t} \circ [s_1, \dots, s_n].$$

Observe that this product is linear in all its arguments.

Composition of tree series

The **composition** of the $\mathbf{F}(\mathfrak{G})$ -series \mathbf{f} and $\mathbf{g}_1, \dots, \mathbf{g}_n$ is the series

$$\mathbf{f}^\circ [g_1, \dots, g_n] := \sum_{\substack{\mathbf{t} \in \mathbf{F}(\mathfrak{G})(n) \\ s_1, \dots, s_n \in \mathbf{F}(\mathfrak{G})}} \left(\langle \mathbf{t}, \mathbf{f} \rangle \prod_{i \in [n]} \langle s_i, g_i \rangle \right) \mathbf{t} \circ [s_1, \dots, s_n].$$

Observe that this product is linear in all its arguments.

Example

$$\left(\begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{ } \end{array} \right) \bar{o} \left[\begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{ } \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{ } \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{ } \end{array} \right] = \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{b} \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{b} \end{array}$$

Composition of tree series

The **composition** of the $\mathbf{F}(\mathfrak{G})$ -series \mathbf{f} and $\mathbf{g}_1, \dots, \mathbf{g}_n$ is the series

$$\mathbf{f} \bar{\circ} [\mathbf{g}_1, \dots, \mathbf{g}_n] := \sum_{\substack{\mathbf{t} \in \mathbf{F}(\mathfrak{G})(n) \\ s_1, \dots, s_n \in \mathbf{F}(\mathfrak{G})}} \left(\langle \mathbf{t}, \mathbf{f} \rangle \prod_{i \in [n]} \langle s_i, \mathbf{g}_i \rangle \right) \mathbf{t} \circ [s_1, \dots, s_n].$$

Observe that this product is linear in all its arguments.

Example

$$\left(\begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{ } \end{array} \right) \bar{\circ} \left[\text{1}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{ } \end{array}, \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{ } \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{ } \end{array} \right] = \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} + \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{b} \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} + \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{b} \end{array}$$

For all $\mathbf{t} \in \mathbf{F}(\mathfrak{G})(n)$ and all $\mathbf{F}(\mathfrak{G})$ -series $\mathbf{g}_1, \dots, \mathbf{g}_n$,

$$\text{ev}(\mathbf{t} \bar{\circ} [\mathbf{g}_1, \dots, \mathbf{g}_n]) = \prod_{i \in [n]} \text{ev}(\mathbf{g}_i).$$

Tree series avoiding patterns

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and set

$$\mathbf{f}(\mathcal{P}) := \mathbf{f}_{\mathbf{A}(\mathcal{P})} = \sum_{\substack{t \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec t}} t$$

as the series of the \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

Tree series avoiding patterns

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and set

$$\mathbf{f}(\mathcal{P}) := \mathbf{f}_{\mathbf{A}(\mathcal{P})} = \sum_{\substack{t \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec t}} t$$

as the series of the \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

When $\mathfrak{G}(1) = \emptyset$, each $\mathbf{F}(\mathfrak{G})(n)$ is finite and thus, there is a finite number of \mathfrak{G} -trees of arity n avoiding \mathcal{P} . Therefore, the series

$$\text{ev}(\mathbf{f}(\mathcal{P})) = \mathcal{G}_{\mathbf{A}(\mathcal{P})}(t)$$

is well-defined.

Tree series avoiding patterns

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and set

$$\mathbf{f}(\mathcal{P}) := \mathbf{f}_{\mathbf{A}(\mathcal{P})} = \sum_{\substack{t \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec t}} t$$

as the series of the \mathfrak{G} -trees avoiding all patterns of \mathcal{P} .

When $\mathfrak{G}(1) = \emptyset$, each $\mathbf{F}(\mathfrak{G})(n)$ is finite and thus, there is a finite number of \mathfrak{G} -trees of arity n avoiding \mathcal{P} . Therefore, the series

$$\text{ev}(\mathbf{f}(\mathcal{P})) = \mathcal{G}_{\mathbf{A}(\mathcal{P})}(t)$$

is well-defined.

Goal

Given \mathfrak{G} and $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$, provide an expression for $\mathbf{f}(\mathcal{P})$.

Occurrences at root

A \mathfrak{G} -tree \mathfrak{t} admits an occurrence of a \mathfrak{G} -tree \mathfrak{s} at root if there exists $\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|} \in \mathbf{F}(\mathfrak{G})$ and $i \in [|\mathfrak{r}|]$ such that

$$\mathfrak{t} = \mathfrak{s} \circ [\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|}] .$$

This property is denoted by $\mathfrak{s} \preccurlyeq_r \mathfrak{t}$.

Occurrences at root

A \mathfrak{G} -tree \mathfrak{t} admits an occurrence of a \mathfrak{G} -tree \mathfrak{s} at root if there exists $\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|} \in \mathbf{F}(\mathfrak{G})$ and $i \in [|\mathfrak{r}|]$ such that

$$\mathfrak{t} = \mathfrak{s} \circ [\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|}] .$$

This property is denoted by $\mathfrak{s} \preceq_r \mathfrak{t}$.

Example

Occurrences at root

A \mathfrak{G} -tree \mathfrak{t} admits an occurrence of a \mathfrak{G} -tree \mathfrak{s} at root if there exists $\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|} \in \mathbf{F}(\mathfrak{G})$ and $i \in [|\mathfrak{r}|]$ such that

$$\mathfrak{t} = \mathfrak{s} \circ [\mathfrak{r}_1, \dots, \mathfrak{r}_{|\mathfrak{s}|}] .$$

This property is denoted by $\mathfrak{s} \preccurlyeq_r \mathfrak{t}$.

Example

Assume that $\mathfrak{t} = \mathfrak{a} \circ [\mathfrak{t}_1, \dots, \mathfrak{t}_k]$ and $\mathfrak{s} = \mathfrak{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k]$ where $\mathfrak{a} \in \mathfrak{G}(k)$.

Occurrences at root

A \mathfrak{G} -tree \mathbf{t} admits an occurrence of a \mathfrak{G} -tree \mathbf{s} at root if there exists $\mathbf{r}_1, \dots, \mathbf{r}_{|\mathbf{s}|} \in \mathbf{F}(\mathfrak{G})$ and $i \in [|\mathbf{r}|]$ such that

$$\mathbf{t} = \mathbf{s} \circ [\mathbf{r}_1, \dots, \mathbf{r}_{|\mathbf{s}|}] .$$

This property is denoted by $\mathbf{s} \preceq_r \mathbf{t}$.

Example

Assume that $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ and $\mathbf{s} = \mathbf{a} \circ [\mathbf{s}_1, \dots, \mathbf{s}_k]$ where $\mathbf{a} \in \mathfrak{G}(k)$.

Then, $\mathbf{s} \not\preceq_r \mathbf{t}$ if and only if there exists an $i \in [k]$ such that $\mathbf{s}_i \not\preceq_r \mathbf{t}_i$.

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{ \mathfrak{s} \in \mathcal{P} : \mathbf{a} \preccurlyeq_{\mathbf{r}} \mathfrak{s} \}.$$

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{\mathfrak{s} \in \mathcal{P} : \mathbf{a} \preccurlyeq_{\mathbf{r}} \mathfrak{s}\}.$$

A \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ avoids at root all patterns of \mathcal{P} if for all patterns $\mathfrak{s} = \mathbf{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k] \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \not\preccurlyeq_{\mathbf{r}} \mathbf{t}_i$.

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{\mathfrak{s} \in \mathcal{P} : \mathbf{a} \preccurlyeq_{\mathbf{r}} \mathfrak{s}\}.$$

A \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ avoids at root all patterns of \mathcal{P} if for all patterns $\mathfrak{s} = \mathbf{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k] \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \not\preccurlyeq_{\mathbf{r}} \mathbf{t}_i$.

A word (S_1, \dots, S_k) where letters are sets of \mathfrak{G} -trees different from $\mathbf{1}$ is $\mathcal{P}_{\mathbf{a}}$ -admissible if for any $\mathfrak{s} \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \in S_i$.

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{\mathfrak{s} \in \mathcal{P} : \mathbf{a} \preceq_{\mathbf{r}} \mathfrak{s}\}.$$

A \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ avoids at root all patterns of \mathcal{P} if for all patterns $\mathfrak{s} = \mathbf{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k] \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \not\preceq_{\mathbf{r}} \mathbf{t}_i$.

A word (S_1, \dots, S_k) where letters are sets of \mathfrak{G} -trees different from $\mathbf{1}$ is $\mathcal{P}_{\mathbf{a}}$ -admissible if for any $\mathfrak{s} \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \in S_i$.

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \mathbf{c} \\ \swarrow \searrow \\ \mathbf{a} \quad \mathbf{a} \end{array}, \begin{array}{c} \mathbf{c} \\ \swarrow \searrow \\ \mathbf{b} \quad \mathbf{a} \end{array}, \begin{array}{c} \mathbf{c} \\ \swarrow \searrow \\ \mathbf{c} \quad \mathbf{a} \end{array} \right\}$. In terms of $\mathcal{P}_{\mathbf{c}}$ -admissibility, the word

► $\left(\left\{ \begin{array}{c} \mathbf{1} \\ \mathbf{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \mathbf{1} \\ \mathbf{a} \end{array} \right\} \right)$ is;

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{\mathfrak{s} \in \mathcal{P} : \mathbf{a} \preccurlyeq_{\mathbf{r}} \mathfrak{s}\}.$$

A \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ avoids at root all patterns of \mathcal{P} if for all patterns $\mathfrak{s} = \mathbf{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k] \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \not\preccurlyeq_{\mathbf{r}} \mathbf{t}_i$.

A word (S_1, \dots, S_k) where letters are sets of \mathfrak{G} -trees different from $\mathbf{1}$ is $\mathcal{P}_{\mathbf{a}}$ -admissible if for any $\mathfrak{s} \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \in S_i$.

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \mathbf{c} \\ \diagup \quad \diagdown \\ \mathbf{a} \quad \mathbf{1} \end{array}, \begin{array}{c} \mathbf{c} \\ \diagup \quad \diagdown \\ \mathbf{b} \quad \mathbf{a} \end{array}, \begin{array}{c} \mathbf{c} \\ \diagup \quad \diagdown \\ \mathbf{c} \quad \mathbf{a} \end{array} \right\}$. In terms of $\mathcal{P}_{\mathbf{c}}$ -admissibility, the word

- ▶ $\left(\left\{ \begin{array}{c} \mathbf{1} \\ \diagup \quad \diagdown \\ \mathbf{a} \quad \mathbf{1} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \mathbf{1} \\ \diagup \quad \diagdown \\ \mathbf{a} \quad \mathbf{1} \end{array} \right\} \right)$ is;
- ▶ $\left(\left\{ \begin{array}{c} \mathbf{1} \\ \diagup \quad \diagdown \\ \mathbf{a} \quad \mathbf{1} \end{array}, \begin{array}{c} \mathbf{c} \\ \diagup \quad \diagdown \\ \mathbf{1} \quad \mathbf{c} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \mathbf{1} \\ \diagup \quad \diagdown \\ \mathbf{a} \quad \mathbf{1} \end{array} \right\} \right)$ is;

Admissible words

Let $\mathcal{P} \subseteq \mathbf{F}(\mathfrak{G})$ and $\mathbf{a} \in \mathfrak{G}(k)$. Let

$$\mathcal{P}_{\mathbf{a}} := \{\mathfrak{s} \in \mathcal{P} : \mathbf{a} \preceq_{\mathbf{r}} \mathfrak{s}\}.$$

A \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ avoids at root all patterns of \mathcal{P} if for all patterns $\mathfrak{s} = \mathbf{a} \circ [\mathfrak{s}_1, \dots, \mathfrak{s}_k] \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \not\preceq_{\mathbf{r}} \mathbf{t}_i$.

A word (S_1, \dots, S_k) where letters are sets of \mathfrak{G} -trees different from $\mathbf{1}$ is $\mathcal{P}_{\mathbf{a}}$ -admissible if for any $\mathfrak{s} \in \mathcal{P}_{\mathbf{a}}$, there is an $i \in [k]$ such that $\mathfrak{s}_i \in S_i$.

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{b} \quad \text{a} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} \right\}$. In terms of $\mathcal{P}_{\mathbf{c}}$ -admissibility, the word

► $\left(\left\{ \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\} \right)$ is;

► $\left(\left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \end{array}, \begin{array}{c} \text{c} \\ \diagup \quad \diagdown \\ \text{c} \quad \text{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \end{array} \right\} \right)$ is not;

► $\left(\left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \end{array} \right\}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{c} \end{array} \right\}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{c} \end{array} \right\} \right)$ is not.

Back to tree series

Let $\mathcal{P}, \mathcal{R} \subseteq \mathbf{F}(\mathfrak{G})$.

Let the tree series

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) := \sum_{\substack{t \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec t \\ \forall s \in \mathcal{R}, s \not\prec_r t}} t$$

of the \mathfrak{G} -trees avoiding \mathcal{P} and avoiding \mathcal{R} at root.

Back to tree series

Let $\mathcal{P}, \mathcal{R} \subseteq \mathbf{F}(\mathfrak{G})$.

Let the tree series

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) := \sum_{\substack{\mathbf{t} \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec \mathbf{t} \\ \forall s \in \mathcal{R}, s \not\prec_r \mathbf{t}}} \mathbf{t}$$

of the \mathfrak{G} -trees avoiding \mathcal{P} and avoiding \mathcal{R} at root.

If (S_1, \dots, S_k) is a $(\mathcal{P} \cup \mathcal{R})_{\mathbf{a}}$ -admissible word, $\mathbf{a} \circ [\mathbf{f}(\mathcal{P}, S_1), \dots, \mathbf{f}(\mathcal{P}, S_k)]$ is the characteristic series of all the \mathfrak{G} -trees $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ such that all \mathbf{t}_i avoid \mathcal{P} and avoid S_i at root.

Back to tree series

Let $\mathcal{P}, \mathcal{R} \subseteq \mathbf{F}(\mathfrak{G})$.

Let the tree series

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) := \sum_{\substack{\mathbf{t} \in \mathbf{F}(\mathfrak{G}) \\ \forall s \in \mathcal{P}, s \not\prec \mathbf{t} \\ \forall s \in \mathcal{R}, s \not\prec_r \mathbf{t}}} \mathbf{t}$$

of the \mathfrak{G} -trees avoiding \mathcal{P} and avoiding \mathcal{R} at root.

If (S_1, \dots, S_k) is a $(\mathcal{P} \cup \mathcal{R})_{\mathbf{a}}$ -admissible word, $\mathbf{a} \bar{\circ} [\mathbf{f}(\mathcal{P}, S_1), \dots, \mathbf{f}(\mathcal{P}, S_k)]$ is the characteristic series of all the \mathfrak{G} -trees $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$ such that all \mathbf{t}_i avoid \mathcal{P} and avoid S_i at root.

Moreover, the support of the tree series

$$\sum_{(S_1, \dots, S_k) \in \mathbf{M}((\mathcal{P} \cup \mathcal{R})_{\mathbf{a}})} \mathbf{a} \bar{\circ} [\mathbf{f}(\mathcal{P}, S_1), \dots, \mathbf{f}(\mathcal{P}, S_k)]$$

is the set of all \mathfrak{G} -trees with root labeled by \mathbf{a} and avoiding \mathcal{P} and avoiding \mathcal{R} at root.

System of equations

Observe that for any $\mathcal{R}, \mathcal{R}' \subseteq \mathbf{F}(\mathfrak{G})$, the characteristic series of the \mathfrak{G} -trees avoiding \mathcal{P} , and avoiding \mathcal{R} or \mathcal{R}' at root is

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) + \mathbf{f}(\mathcal{P}, \mathcal{R}') - \mathbf{f}(\mathcal{P}, \mathcal{R} \cup \mathcal{R}').$$

Therefore, the description of $\mathbf{f}(\mathcal{P}, \mathcal{R})$ uses the inclusion-exclusion principle.

System of equations

Observe that for any $\mathcal{R}, \mathcal{R}' \subseteq \mathbf{F}(\mathfrak{G})$, the characteristic series of the \mathfrak{G} -trees avoiding \mathcal{P} , and avoiding \mathcal{R} or \mathcal{R}' at root is

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) + \mathbf{f}(\mathcal{P}, \mathcal{R}') - \mathbf{f}(\mathcal{P}, \mathcal{R} \cup \mathcal{R}').$$

Therefore, the description of $\mathbf{f}(\mathcal{P}, \mathcal{R})$ uses the inclusion-exclusion principle.

Theorem [G., 2017—]

For any set \mathfrak{G} of letters and $\mathcal{P}, \mathcal{R} \subseteq \mathbf{F}(\mathfrak{G})$,

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) = \mathbf{1} + \sum_{\substack{k \geq 1 \\ \mathbf{a} \in \mathfrak{G}^{(k)}}} \sum_{\substack{\ell \geq 1 \\ \{u_1, \dots, u_\ell\} \subseteq \mathbf{M}((\mathcal{P} \cup \mathcal{R})_{\mathbf{a}}) \\ (S_1, \dots, S_k) := u_1 \oplus \dots \oplus u_\ell}} (-1)^{1+\ell} \mathbf{a} \circ [\mathbf{f}(\mathcal{P}, S_1), \dots, \mathbf{f}(\mathcal{P}, S_k)].$$

System of equations

Observe that for any $\mathcal{R}, \mathcal{R}' \subseteq \mathbf{F}(\mathfrak{G})$, the characteristic series of the \mathfrak{G} -trees avoiding \mathcal{P} , and avoiding \mathcal{R} or \mathcal{R}' at root is

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) + \mathbf{f}(\mathcal{P}, \mathcal{R}') - \mathbf{f}(\mathcal{P}, \mathcal{R} \cup \mathcal{R}').$$

Therefore, the description of $\mathbf{f}(\mathcal{P}, \mathcal{R})$ uses the inclusion-exclusion principle.

Theorem [G., 2017—]

For any set \mathfrak{G} of letters and $\mathcal{P}, \mathcal{R} \subseteq \mathbf{F}(\mathfrak{G})$,

$$\mathbf{f}(\mathcal{P}, \mathcal{R}) = \mathbf{1} + \sum_{\substack{k \geq 1 \\ \mathbf{a} \in \mathfrak{G}^{(k)}}} \sum_{\substack{\ell \geq 1 \\ \{u_1, \dots, u_\ell\} \subseteq \mathbf{M}((\mathcal{P} \cup \mathcal{R})_{\mathbf{a}}) \\ (S_1, \dots, S_k) := u_1 \oplus \dots \oplus u_\ell}} (-1)^{1+\ell} \mathbf{a} \circ [\mathbf{f}(\mathcal{P}, S_1), \dots, \mathbf{f}(\mathcal{P}, S_k)].$$

Since in particular $\mathbf{f}(\mathcal{P}) = \mathbf{f}(\mathcal{P}, \emptyset)$ this provides a system of equations describing $\mathbf{f}(\mathcal{P})$.

Main equation for the previous example

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ a \quad b \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ b \quad a \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ c \quad a \end{array} \right\}.$$

One has $M(\mathcal{P}_a) = M(\mathcal{P}_b) = \{(\emptyset, \emptyset)\}$ and

$$M(\mathcal{P}_c) = \left\{ \left(\left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \quad \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \quad \end{array} \right\} \right), \left(\left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \quad \end{array}, \begin{array}{c} \dot{b} \\ \diagup \quad \diagdown \\ \quad \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ \quad \end{array} \right\}, \emptyset, \emptyset \right) \right\}.$$

Therefore,

Main equation for the previous example

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{a} \quad \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{b} \quad \dot{a} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{c} \quad \dot{a} \end{array} \right\}.$$

One has $M(\mathcal{P}_a) = M(\mathcal{P}_b) = \{(\emptyset, \emptyset)\}$ and

$$M(\mathcal{P}_c) = \left\{ \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array} \right\} \right), \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array}, \begin{array}{c} \dot{b} \\ \swarrow \quad \searrow \\ \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{c} \quad \dot{a} \end{array} \right\}, \emptyset, \emptyset \right) \right\}.$$

Therefore,

$$\mathbf{f}(\mathcal{P}, \emptyset) = \mathbf{1}$$

Main equation for the previous example

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ \dot{a} \quad \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ \dot{b} \quad \dot{a} \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ \dot{c} \quad \dot{a} \end{array} \right\}.$$

One has $M(\mathcal{P}_a) = M(\mathcal{P}_b) = \{(\emptyset, \emptyset)\}$ and

$$M(\mathcal{P}_c) = \left\{ \left(\left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \dot{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \dot{a} \end{array} \right\} \right), \left(\left\{ \begin{array}{c} \dot{a} \\ \diagup \quad \diagdown \\ \dot{a} \end{array}, \begin{array}{c} \dot{b} \\ \diagup \quad \diagdown \\ \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \diagup \quad \diagdown \\ \dot{c} \end{array} \right\}, \emptyset, \emptyset \right) \right\}.$$

Therefore,

$$\mathbf{f}(\mathcal{P}, \emptyset) = \mathbf{1} + \mathbf{a} \bar{o} [\mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)]$$

Main equation for the previous example

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{a} \quad \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{b} \quad \dot{a} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{c} \quad \dot{a} \end{array} \right\}.$$

One has $M(\mathcal{P}_a) = M(\mathcal{P}_b) = \{(\emptyset, \emptyset)\}$ and

$$M(\mathcal{P}_c) = \left\{ \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array} \right\} \right), \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \dot{a} \end{array}, \begin{array}{c} \dot{b} \\ \swarrow \quad \searrow \\ \dot{b} \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \dot{c} \end{array} \right\}, \emptyset, \emptyset \right) \right\}.$$

Therefore,

$$\mathbf{f}(\mathcal{P}, \emptyset) = \mathbf{1} + \mathbf{a}\bar{o} [\mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)] + \mathbf{b}\bar{o} [\mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)]$$

Main equation for the previous example

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ a \quad b \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ b \quad a \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ a \quad c \end{array} \right\}.$$

One has $M(\mathcal{P}_a) = M(\mathcal{P}_b) = \{(\emptyset, \emptyset)\}$ and

$$M(\mathcal{P}_c) = \left\{ \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array} \right\} \right), \left(\left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{b} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ a \quad c \end{array} \right\}, \emptyset, \emptyset \right) \right\}.$$

Therefore,

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + a\bar{o} [\mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)] + b\bar{o} [\mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)] \\ &\quad + c\bar{o} [\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array} \right\}), \mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array} \right\})] \\ &\quad + c\bar{o} [\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{b} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ a \quad c \end{array} \right\}), \mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \emptyset)] \\ &\quad - c\bar{o} [\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{b} \\ \swarrow \quad \searrow \\ \quad \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ a \quad c \end{array} \right\}), \mathbf{f}(\mathcal{P}, \emptyset), \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \dot{a} \\ \swarrow \quad \searrow \\ \quad \end{array} \right\})]. \end{aligned}$$

Example: directed animals

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}.$$

Example: directed animals

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}.$$

One has

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \mathbf{a}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \end{aligned}$$

Example: directed animals

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}.$$

One has

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \mathbf{a}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) &= 1 + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \end{aligned}$$

Example: directed animals

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}.$$

One has

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \mathbf{a}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) &= 1 + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) &= 1 + \mathbf{b}\bar{0} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) , \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \end{aligned}$$

Example: directed animals

Example

$$\text{Let } \mathcal{P} := \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}.$$

One has

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \mathbf{a}\bar{\mathbf{a}} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}), \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \mathbf{b}\bar{\mathbf{b}} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}), \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}) &= 1 + \mathbf{b}\bar{\mathbf{b}} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}), \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) &= 1 + \mathbf{b}\bar{\mathbf{b}} \left[\mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array} \right\}), \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) \right], \\ \mathbf{f}(\mathcal{P}, \left\{ \begin{array}{c} \text{a} \\ \diagup \quad \diagdown \\ \text{a} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array}, \begin{array}{c} \text{b} \\ \diagup \quad \diagdown \\ \text{b} \end{array} \right\}) &= 1. \end{aligned}$$

Example: directed animals

Example

By evaluating each member of the previous system, one obtains the system

$$\mathcal{G}_{\mathcal{S}}(t) = t + \mathcal{G}_{\mathcal{S}_1}(t)\mathcal{G}_{\mathcal{S}}(t) + \mathcal{G}_{\mathcal{S}_1}(t)\mathcal{G}_{\mathcal{S}_2}(t),$$

$$\mathcal{G}_{\mathcal{S}_1}(t) = t + \mathcal{G}_{\mathcal{S}_1}(t)\mathcal{G}_{\mathcal{S}_2}(t),$$

$$\mathcal{G}_{\mathcal{S}_2}(t) = t + \mathcal{G}_{\mathcal{S}_1}(t)\mathcal{G}_{\mathcal{S}_3}(t),$$

$$\mathcal{G}_{\mathcal{S}_3}(t) = t$$

for the generating series $\mathcal{G}_{\mathcal{S}}(t)$ of directed animals.

This leads to

$$t + (3t - 1)\mathcal{G}_{\mathcal{S}}(t) + (3t - 1)\mathcal{G}_{\mathcal{S}}(t)^2 = 0,$$

an algebraic equation satisfied by $\mathcal{G}_{\mathcal{S}}(t)$.

Some remarks

The previous result includes, as special cases:

- ▶ pattern avoidance of factors in words [Goulden, Jackson, 1979] when $\mathfrak{G} = \mathfrak{G}(1)$;

Some remarks

The previous result includes, as special cases:

- ▶ pattern avoidance of factors in words [Goulden, Jackson, 1979] when $\mathfrak{G} = \mathfrak{G}(1)$;
- ▶ pattern avoidance of edges in trees [Parker, 1993], [Loday, 2005] when \mathcal{P} contains only trees of degree 2;

Some remarks

The previous result includes, as special cases:

- ▶ pattern avoidance of factors in words [Goulden, Jackson, 1979] when $\mathfrak{G} = \mathfrak{G}(1)$;
- ▶ pattern avoidance of edges in trees [Parker, 1993], [Loday, 2005] when \mathcal{P} contains only trees of degree 2;
- ▶ pattern avoidance in binary trees [Rowland, 2010] when $\mathfrak{G} = \mathfrak{G}(2) = \{a\}$.

Some remarks

The previous result includes, as special cases:

- ▶ pattern avoidance of factors in words [Goulden, Jackson, 1979] when $\mathfrak{G} = \mathfrak{G}(1)$;
- ▶ pattern avoidance of edges in trees [Parker, 1993], [Loday, 2005] when \mathcal{P} contains only trees of degree 2;
- ▶ pattern avoidance in binary trees [Rowland, 2010] when $\mathfrak{G} = \mathfrak{G}(2) = \{a\}$.

Other systems of equations have been described for enumerating trees avoiding patterns in [Khoroshkin, Piontkovski, 2012].

Computing admissible words

Given a \mathfrak{G} -tree $\mathfrak{t} = \mathfrak{a} \circ [\mathfrak{t}_1, \dots, \mathfrak{t}_k]$, let the element

$$\phi(\mathfrak{t}) := \sum_{\substack{i \in [k] \\ \mathfrak{t}_i \neq \mathfrak{a}}} \left(\underbrace{\emptyset, \dots, \emptyset}_{i-1}, \{\mathfrak{t}_i\}, \underbrace{\emptyset, \dots, \emptyset}_{k-i} \right)$$

of the free module $\mathbb{B} \left\langle (2^{\mathbf{F}(\mathfrak{G})})^k \right\rangle$ on the Boolean semiring \mathbb{B} .

Computing admissible words

Given a \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$, let the element

$$\phi(\mathbf{t}) := \sum_{\substack{i \in [k] \\ \mathbf{t}_i \neq \mathbf{1}}} \left(\underbrace{\emptyset, \dots, \emptyset}_{i-1}, \{\mathbf{t}_i\}, \underbrace{\emptyset, \dots, \emptyset}_{k-i} \right)$$

of the free module $\mathbb{B} \left\langle (2^{\mathbf{F}(\mathfrak{G})})^k \right\rangle$ on the Boolean semiring \mathbb{B} .

Let the linear combination

$$e_{\mathcal{P}_a} := \bigoplus_{\mathbf{t} \in \mathcal{P}_a} \phi(\mathbf{t}),$$

containing all \mathcal{P}_a -admissible words (and other \mathcal{P}_a -admissible words).

Computing admissible words

Given a \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$, let the element

$$\phi(\mathbf{t}) := \sum_{\substack{i \in [k] \\ \mathbf{t}_i \neq \emptyset}} \left(\underbrace{\emptyset, \dots, \emptyset}_{i-1}, \{\mathbf{t}_i\}, \underbrace{\emptyset, \dots, \emptyset}_{k-i} \right)$$

of the free module $\mathbb{B} \left\langle (2^{\mathbf{F}(\mathfrak{G})})^k \right\rangle$ on the Boolean semiring \mathbb{B} .

Let the linear combination

$$e_{\mathcal{P}_a} := \bigoplus_{\mathbf{t} \in \mathcal{P}_a} \phi(\mathbf{t}),$$

containing all \mathcal{P}_a -admissible words (and other \mathcal{P}_a -admissible words).

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \text{c} \\ \swarrow \quad \searrow \\ \text{a} \quad \text{a} \\ \swarrow \quad \searrow \end{array}, \begin{array}{c} \text{c} \\ \swarrow \quad \searrow \\ \text{a} \quad \text{b} \\ \swarrow \quad \searrow \end{array} \right\}$. One has $e_{\mathcal{P}_a} = e_{\mathcal{P}_b} = (\emptyset, \emptyset)$

Computing admissible words

Given a \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$, let the element

$$\phi(\mathbf{t}) := \sum_{\substack{i \in [k] \\ \mathbf{t}_i \neq \emptyset}} \left(\underbrace{\emptyset, \dots, \emptyset}_{i-1}, \{\mathbf{t}_i\}, \underbrace{\emptyset, \dots, \emptyset}_{k-i} \right)$$

of the free module $\mathbb{B} \left\langle (2^{\mathbf{F}(\mathfrak{G})})^k \right\rangle$ on the Boolean semiring \mathbb{B} .

Let the linear combination

$$e_{\mathcal{P}_a} := \bigoplus_{\mathbf{t} \in \mathcal{P}_a} \phi(\mathbf{t}),$$

containing all \mathcal{P}_a -admissible words (and other \mathcal{P}_a -admissible words).

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \begin{array}{cc} \dot{a} & \dot{a} \end{array} \\ \swarrow \quad \searrow \\ \text{ } \end{array}, \begin{array}{c} \dot{c} \\ \swarrow \quad \searrow \\ \begin{array}{cc} \dot{a} & \dot{b} \end{array} \\ \swarrow \quad \searrow \\ \text{ } \end{array} \right\}$. One has $e_{\mathcal{P}_a} = e_{\mathcal{P}_b} = (\emptyset, \emptyset)$ and

$$e_{\mathcal{P}_c} = \left(\left(\left(\left\{ \begin{array}{c} \dot{a} \\ \text{ } \end{array} \right\}, \emptyset, \emptyset \right) + \left(\emptyset, \begin{array}{c} \dot{a} \\ \text{ } \end{array}, \emptyset \right) \right) \oplus \left(\left(\left\{ \begin{array}{c} \dot{a} \\ \text{ } \end{array} \right\}, \emptyset, \emptyset \right) + \left(\emptyset, \begin{array}{c} \dot{b} \\ \text{ } \end{array}, \emptyset \right) + \left(\emptyset, \emptyset, \begin{array}{c} \dot{b} \\ \text{ } \end{array} \right) \right) \right)$$

Computing admissible words

Given a \mathfrak{G} -tree $\mathbf{t} = \mathbf{a} \circ [\mathbf{t}_1, \dots, \mathbf{t}_k]$, let the element

$$\phi(\mathbf{t}) := \sum_{\substack{i \in [k] \\ \mathbf{t}_i \neq \emptyset}} \left(\underbrace{\emptyset, \dots, \emptyset}_{i-1}, \{\mathbf{t}_i\}, \underbrace{\emptyset, \dots, \emptyset}_{k-i} \right)$$

of the free module $\mathbb{B} \left\langle (2^{\mathbf{F}(\mathfrak{G})})^k \right\rangle$ on the Boolean semiring \mathbb{B} .

Let the linear combination

$$e_{\mathcal{P}_a} := \bigoplus_{\mathbf{t} \in \mathcal{P}_a} \phi(\mathbf{t}),$$

containing all \mathcal{P}_a -admissible words (and other \mathcal{P}_a -admissible words).

Example

Let $\mathcal{P} := \left\{ \begin{array}{c} \text{c} \\ \text{a} \text{---} \text{a} \\ \text{a} \end{array}, \begin{array}{c} \text{c} \\ \text{a} \text{---} \text{b} \\ \text{a} \text{---} \text{b} \end{array} \right\}$. One has $e_{\mathcal{P}_a} = e_{\mathcal{P}_b} = (\emptyset, \emptyset)$ and

$$\begin{aligned} e_{\mathcal{P}_c} &= \left(\left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \emptyset, \emptyset \right) + \left(\emptyset, \begin{array}{c} \text{a} \\ \text{a} \end{array}, \emptyset \right) \right) \oplus \left(\left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \emptyset, \emptyset \right) + \left(\emptyset, \begin{array}{c} \text{b} \\ \text{a} \end{array}, \emptyset \right) + \left(\emptyset, \emptyset, \begin{array}{c} \text{b} \\ \text{a} \end{array} \right) \right) \\ &= \left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \emptyset, \emptyset \right) + \left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \left\{ \begin{array}{c} \text{b} \\ \text{a} \end{array} \right\}, \emptyset \right) + \left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \emptyset, \left\{ \begin{array}{c} \text{b} \\ \text{a} \end{array} \right\} \right) \\ &\quad + \left(\left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \emptyset \right) + \left(\emptyset, \left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \left\{ \begin{array}{c} \text{b} \\ \text{a} \end{array} \right\}, \emptyset \right) + \left(\emptyset, \left\{ \begin{array}{c} \text{a} \\ \text{a} \end{array} \right\}, \left\{ \begin{array}{c} \text{b} \\ \text{a} \end{array} \right\} \right). \end{aligned}$$

Outline

Operads and enumeration

Operators

An **operator** is an entity having $n \geq 1$ inputs and a single output:

Its **arity** is its number n of inputs.

Operators

An **operator** is an entity having $n \geq 1$ inputs and a single output:

Its **arity** is its number n of inputs.

Composing two operators x and y consists in

1. selecting an input of x specified by its position i ;
2. grafting the output of y onto this input.

Operators

An **operator** is an entity having $n \geq 1$ inputs and a single output:

Its **arity** is its number n of inputs.

Composing two operators x and y consists in

1. selecting an input of x specified by its position i ;
2. grafting the output of y onto this input.

This produces a new operator $x \circ_i y$ of arity $n + m - 1$:

Operads

Operads are algebraic structures formalizing the notion of operators and their composition.

Operads

Operads are algebraic structures formalizing the notion of operators and their composition.

A (nonsymmetric set-theoretic) **operad** is a triple $(\mathcal{O}, \circ_i, \mathbb{1})$ where

1. \mathcal{O} is a **graded set**

$$\mathcal{O} := \bigsqcup_{n \geq 1} \mathcal{O}(n);$$

Operads

Operads are algebraic structures formalizing the notion of operators and their composition.

A (nonsymmetric set-theoretic) **operad** is a triple $(\mathcal{O}, \circ_i, \mathbb{1})$ where

1. \mathcal{O} is a **graded set**

$$\mathcal{O} := \bigsqcup_{n \geq 1} \mathcal{O}(n);$$

2. \circ_i is a map, called **partial composition map**,

$$\circ_i : \mathcal{O}(n) \times \mathcal{O}(m) \rightarrow \mathcal{O}(n + m - 1), \quad 1 \leq i \leq n, \quad 1 \leq m;$$

Operads

Operads are algebraic structures formalizing the notion of operators and their composition.

A (nonsymmetric set-theoretic) **operad** is a triple $(\mathcal{O}, \circ_i, \mathbb{1})$ where

1. \mathcal{O} is a **graded set**

$$\mathcal{O} := \bigsqcup_{n \geq 1} \mathcal{O}(n);$$

2. \circ_i is a map, called **partial composition map**,

$$\circ_i : \mathcal{O}(n) \times \mathcal{O}(m) \rightarrow \mathcal{O}(n + m - 1), \quad 1 \leq i \leq n, \quad 1 \leq m;$$

3. $\mathbb{1}$ is an element of $\mathcal{O}(1)$ called **unit**.

Operads

Operads are algebraic structures formalizing the notion of operators and their composition.

A (nonsymmetric set-theoretic) **operad** is a triple $(\mathcal{O}, \circ_i, \mathbb{1})$ where

1. \mathcal{O} is a **graded set**

$$\mathcal{O} := \bigsqcup_{n \geq 1} \mathcal{O}(n);$$

2. \circ_i is a map, called **partial composition map**,

$$\circ_i : \mathcal{O}(n) \times \mathcal{O}(m) \rightarrow \mathcal{O}(n + m - 1), \quad 1 \leq i \leq n, \quad 1 \leq m;$$

3. $\mathbb{1}$ is an element of $\mathcal{O}(1)$ called **unit**.

This data has to satisfy some axioms.

Operad axioms

Associativity:

$$(x \circ_i y) \circ_{i+j-1} z = x \circ_i (y \circ_j z)$$

$$1 \leq i \leq |x|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(x \circ_i y)$$

$$1 \leq i \leq |x|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(x \circ_i y) \circ_{i+j-1} z$$
$$1 \leq i \leq |x|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(\mathbf{x} \circ_i y) \circ_{i+j-1} z \quad (y \circ_j z)$$

$$1 \leq i \leq |\mathbf{x}|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(x \circ_i y) \circ_{i+j-1} z = x \circ_i (y \circ_j z)$$

$$1 \leq i \leq |x|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(\mathbf{x} \circ_i y) \circ_{i+j-1} z = \mathbf{x} \circ_i (y \circ_j z)$$

$$1 \leq i \leq |\mathbf{x}|, 1 \leq j \leq |y|$$

Operad axioms

Associativity:

$$(\mathbf{x} \circ_i y) \circ_{i+j-1} z = \mathbf{x} \circ_i (y \circ_j z)$$

$$1 \leq i \leq |\mathbf{x}|, 1 \leq j \leq |y|$$

Commutativity:

$$(\mathbf{x} \circ_i y) \circ_{j+|y|-1} z = (\mathbf{x} \circ_j z) \circ_i y$$

$$1 \leq i < j \leq |\mathbf{x}|$$

Operad axioms

Associativity:

$$(\mathbf{x} \circ_i y) \circ_{i+j-1} z = \mathbf{x} \circ_i (y \circ_j z)$$

$$1 \leq i \leq |\mathbf{x}|, 1 \leq j \leq |y|$$

Commutativity:

$$(\mathbf{x} \circ_i y)$$

$$1 \leq i < j \leq |\mathbf{x}|$$

Operad axioms

Associativity:

$$(\mathbf{x} \circ_i y) \circ_{i+j-1} z = \mathbf{x} \circ_i (y \circ_j z)$$

$$1 \leq i \leq |\mathbf{x}|, 1 \leq j \leq |y|$$

Commutativity:

$$\mathbf{1} \circ_i \mathbf{x} = \mathbf{x} = \mathbf{x} \circ_i \mathbf{1}$$

$$1 \leq i \leq |\mathbf{x}|$$

Free operads

Let \mathcal{G} be a set of letters.

Free operads

Let \mathcal{G} be a set of letters.

The **free operad** on \mathcal{G} is the operad $\mathbf{F}(\mathcal{G})$ wherein

- ▶ elements of arity n are the \mathcal{G} -trees of arity n ;

Free operads

Let \mathfrak{G} be a set of letters.

The **free operad** on \mathfrak{G} is the operad $\mathbf{F}(\mathfrak{G})$ wherein

- ▶ elements of arity n are the \mathfrak{G} -trees of arity n ;
- ▶ the partial composition map \circ_i is the one of the \mathfrak{G} -trees;

Free operads

Let \mathfrak{G} be a set of letters.

The **free operad** on \mathfrak{G} is the operad $\mathbf{F}(\mathfrak{G})$ wherein

- ▶ elements of arity n are the \mathfrak{G} -trees of arity n ;
- ▶ the partial composition map \circ_i is the one of the \mathfrak{G} -trees;
- ▶ the unit is 1 .

Free operads

Let \mathfrak{G} be a set of letters.

The **free operad** on \mathfrak{G} is the operad $\mathbf{F}(\mathfrak{G})$ wherein

- ▶ elements of arity n are the \mathfrak{G} -trees of arity n ;
- ▶ the partial composition map \circ_i is the one of the \mathfrak{G} -trees;
- ▶ the unit is 1 .

Let $c : \mathfrak{G} \rightarrow \mathbf{F}(\mathfrak{G})$ be the natural injection (made implicit in the sequel).

Free operads

Let \mathfrak{G} be a set of letters.

The **free operad** on \mathfrak{G} is the operad $\mathbf{F}(\mathfrak{G})$ wherein

- ▶ elements of arity n are the \mathfrak{G} -trees of arity n ;
- ▶ the partial composition map \circ_i is the one of the \mathfrak{G} -trees;
- ▶ the unit is 1 .

Let $c : \mathfrak{G} \rightarrow \mathbf{F}(\mathfrak{G})$ be the natural injection (made implicit in the sequel).

Free operads satisfy the following universality property.

For any set \mathfrak{G} of letters, any operad \mathcal{O} , and any map $f : \mathfrak{G} \rightarrow \mathcal{O}$ respecting the arities, there exists a unique operad morphism $\phi : \mathbf{F}(\mathfrak{G}) \rightarrow \mathcal{O}$ such that $f = \phi \circ c$.

An operad on paths

Let **Paths** be the operad wherein:

- **Paths**(n) is the set of all **paths** with n points, that are words $u_1 \dots u_n$ of elements of \mathbb{N} .

Example

is the path 1212232100112 of arity 13.

An operad on paths

Let **Paths** be the operad wherein:

- **Paths**(n) is the set of all **paths** with n points, that are words $u_1 \dots u_n$ of elements of \mathbb{N} .

Example

is the path 1212232100112 of arity 13.

- The partial composition $u \circ_i v$ is computed by replacing the i th point of u by a copy of v .

Example

An operad on paths

Let **Paths** be the operad wherein:

- **Paths**(n) is the set of all **paths** with n points, that are words $u_1 \dots u_n$ of elements of \mathbb{N} .

Example

is the path 1212232100112 of arity 13.

- The partial composition $u \circ_i v$ is computed by replacing the i th point of u by a copy of v .

Example

- The unit is the path 0, depicted as \circ , having arity 1.

Suboperad on m -Dyck paths

Let for any $m \geq 0$ the suboperad $m\mathbf{Dyck}$ of \mathbf{Paths} generated by

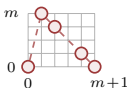

$$\mathfrak{G}_{m\text{Dyck}} := \mathfrak{G}_{m\text{Dyck}}(m+2) := \{\mathfrak{g}_m\} \text{ where}$$

$$\mathfrak{g}_m := 0^m (m-1) \dots 10 =$$

Suboperad on m -Dyck paths

Let for any $m \geq 0$ the suboperad $m\mathbf{Dyck}$ of \mathbf{Paths} generated by

$\mathfrak{G}_{m\mathbf{Dyck}} := \mathfrak{G}_{m\mathbf{Dyck}}(m+2) := \{\mathfrak{g}_m\}$ where

$$\mathfrak{g}_m := 0\ m\ (m-1) \dots 1\ 0 =$$

Example

The elements of $2\mathbf{Dyck}$ are, by definition, the paths obtained by composing \mathfrak{g}_m with itself.

- ▶ $2\mathbf{Dyck}(1) = \{\circ\};$
- ▶ $2\mathbf{Dyck}(2) = 2\mathbf{Dyck}(3) = \emptyset;$
- ▶ $2\mathbf{Dyck}(4) = \left\{ \begin{array}{c} \circ \\ \diagup \diagdown \\ \circ \end{array} \right\};$
- ▶ $2\mathbf{Dyck}(5) = 2\mathbf{Dyck}(6) = \emptyset;$
- ▶ $2\mathbf{Dyck}(7) = \left\{ \begin{array}{c} \circ \quad \circ \quad \circ \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \\ \circ \quad \circ \quad \circ \end{array} \right\};$
- ▶ $2\mathbf{Dyck}(8) = 2\mathbf{Dyck}(9) = \emptyset.$

Suboperad on m -Dyck paths

Let for any $m \geq 0$ the suboperad $m\mathbf{Dyck}$ of \mathbf{Paths} generated by

$$\mathfrak{G}_{m\text{Dyck}} := \mathfrak{G}_{m\text{Dyck}}(m+2) := \{\mathfrak{g}_m\} \text{ where}$$

$$\mathfrak{g}_m := 0^m(m-1) \dots 10 =$$

Example

The elements of $2\mathbf{Dyck}$ are, by definition, the paths obtained by composing g_m with itself.

- ▶ $2\mathbf{Dyck}(1) = \{\circ\};$
- ▶ $2\mathbf{Dyck}(2) = 2\mathbf{Dyck}(3) = \emptyset;$
- ▶ $2\mathbf{Dyck}(4) = \left\{ \begin{array}{c} \circ \quad \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \right\};$
- ▶ $2\mathbf{Dyck}(5) = 2\mathbf{Dyck}(6) = \emptyset;$
- ▶ $2\mathbf{Dyck}(7) = \left\{ \begin{array}{c} \circ \quad \circ \quad \circ \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \\ \circ \quad \circ \quad \circ \end{array}, \begin{array}{c} \circ \quad \circ \quad \circ \quad \circ \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \\ \circ \quad \circ \quad \circ \end{array}, \begin{array}{c} \circ \quad \circ \quad \circ \quad \circ \quad \circ \\ \diagup \quad \diagdown \quad \diagup \quad \diagdown \quad \diagup \quad \diagdown \\ \circ \quad \circ \quad \circ \quad \circ \end{array} \right\};$
- ▶ $2\mathbf{Dyck}(8) = 2\mathbf{Dyck}(9) = \emptyset.$

Proposition

For any $m \geq 0$ and $n \geq 1$, $m\mathbf{Dyck}(n)$ is the set of all m -Dyck paths of length $n - 1$.

Presentations

Let \mathcal{O} be an operad.

A **presentation** of \mathcal{O} is a pair (\mathfrak{G}, \equiv) where

Presentations

Let \mathcal{O} be an operad.

A **presentation** of \mathcal{O} is a pair (\mathfrak{G}, \equiv) where

- ▶ \mathfrak{G} is a set of letters, called **generating set**;

Presentations

Let \mathcal{O} be an operad.

A **presentation** of \mathcal{O} is a pair (\mathfrak{G}, \equiv) where

- ▶ \mathfrak{G} is a set of letters, called **generating set**;
- ▶ \equiv is an operad congruence of $\mathbf{F}(\mathfrak{G})$, that is an equivalence relation on the \mathfrak{G} -trees such that if $t \equiv t'$ and $s \equiv s'$, then $t \circ_i s \equiv t' \circ_i s'$;

Presentations

Let \mathcal{O} be an operad.

- ▶ \equiv is an operad congruence of $\mathbf{F}(\mathfrak{G})$, that is an equivalence relation on the \mathfrak{G} -trees such that if $t \equiv t'$ and $s \equiv s'$, then $t \circ_i s \equiv t' \circ_i s'$;

such that

$$\mathcal{O} \simeq \mathbf{F}(\mathfrak{G}) / \equiv.$$

The presentation (\mathfrak{G}, \equiv) is

- ▶ **binary** when $\mathfrak{G} = \mathfrak{G}(2)$;

Presentations

Let \mathcal{O} be an operad.

A **presentation** of \mathcal{O} is a pair (\mathfrak{G}, \equiv) where

- ▶ \mathfrak{G} is a set of letters, called **generating set**;
- ▶ \equiv is an operad congruence of $\mathbf{F}(\mathfrak{G})$, that is an equivalence relation on the \mathfrak{G} -trees such that if $t \equiv t'$ and $s \equiv s'$, then $t \circ_i s \equiv t' \circ_i s'$;

such that

$$\mathcal{O} \simeq \mathbf{F}(\mathfrak{G}) / \equiv.$$

The presentation (\mathfrak{G}, \equiv) is

- ▶ **binary** when $\mathfrak{G} = \mathfrak{G}(2)$;
- ▶ **quadratic** when \equiv is generated as an operad congruence by an equivalence relation on trees concentrated in degree 2.

Presentation of $m\mathbf{Dyck}$

To find a presentation of $m\mathbf{Dyck}$, we list all the nontrivial relations made of expressions involving the generator \mathfrak{g}_m and the \circ_i . We find for instance in $2\mathbf{Dyck}$,

$$\mathfrak{g}_2 \circ_1 \mathfrak{g}_2 = \mathfrak{g}_2 \circ_4 \mathfrak{g}_2$$

Presentation of $m\mathbf{Dyck}$

To find a presentation of $m\mathbf{Dyck}$, we list all the nontrivial relations made of expressions involving the generator \mathfrak{g}_m and the \circ_i . We find for instance in $2\mathbf{Dyck}$,

$$\mathfrak{g}_2 \circ_1 \mathfrak{g}_2 = \mathfrak{g}_2 \circ_4 \mathfrak{g}_2$$

Proposition

For any $m \geq 0$, $m\mathbf{Dyck}$ admits the presentation $(\mathfrak{G}_{m\mathbf{Dyck}}, \equiv_{m\mathbf{Dyck}})$ where

$$\mathfrak{G}_{m\mathbf{Dyck}} := \{\mathfrak{g}_m\}$$

and $\equiv_{m\mathbf{Dyck}}$ is the smallest congruence of $\mathbf{F}(\mathfrak{G}_{m\mathbf{Dyck}})$ satisfying

$$\mathfrak{g}_m \circ_1 \mathfrak{g}_m \equiv_{m\mathbf{Dyck}} \mathfrak{g}_m \circ_{m+2} \mathfrak{g}_m.$$

Presentation of $m\mathbf{Dyck}$

To find a presentation of $m\mathbf{Dyck}$, we list all the nontrivial relations made of expressions involving the generator \mathfrak{g}_m and the \circ_i . We find for instance in $2\mathbf{Dyck}$,

$$\mathfrak{g}_2 \circ_1 \mathfrak{g}_2 = \mathfrak{g}_2 \circ_4 \mathfrak{g}_2$$

Proposition

For any $m \geq 0$, $m\mathbf{Dyck}$ admits the presentation $(\mathfrak{G}_{m\mathbf{Dyck}}, \equiv_{m\mathbf{Dyck}})$ where

$$\mathfrak{G}_{m\mathbf{Dyck}} := \{\mathfrak{g}_m\}$$

and $\equiv_{m\mathbf{Dyck}}$ is the smallest congruence of $\mathbf{F}(\mathfrak{G}_{m\mathbf{Dyck}})$ satisfying

$$\mathfrak{g}_m \circ_1 \mathfrak{g}_m \equiv_{m\mathbf{Dyck}} \mathfrak{g}_m \circ_{m+2} \mathfrak{g}_m.$$

This says that all relations in higher degrees are consequence of this single one and the operad axioms.

An operad on Motzkin paths

Let **Motz** be an operad wherein:

- **Motz**(n) is the set of all Motzkin paths with n points.

Example

is a Motzkin path of arity 16.

An operad on Motzkin paths

Let **Motz** be an operad wherein:

- **Motz**(n) is the set of all Motzkin paths with n points.

Example

is a Motzkin path of arity 16.

- The partial composition in **Motz** is the one of **Paths**.

Example

An operad on Motzkin paths

Let **Motz** be an operad wherein:

- **Motz**(n) is the set of all Motzkin paths with n points.

Example

is a Motzkin path of arity 16.

- The partial composition in **Motz** is the one of **Paths**.

Example

- The unit is \circ .

Properties of **Motz**

Proposition

Motz is a suboperad of **Paths**.

Properties of **Motz**

Proposition

Motz is a suboperad of **Paths**.

Proposition

The operad **Motz** admits the presentation $(\mathfrak{G}_{\mathbf{Motz}}, \equiv_{\mathbf{Motz}})$ where

$$\mathfrak{G}_{\mathbf{Motz}} := \{ \text{---} \circ \text{---}, \text{---} \circ \text{---} \circ \text{---} \}$$

and \equiv is the smallest operad congruence satisfying

$$\text{---} \circ_1 \text{---} \circ \text{---} \equiv_{\mathbf{Motz}} \text{---} \circ_2 \text{---} \circ \text{---},$$

$$\text{---} \circ_1 \text{---} \circ \text{---} \equiv_{\mathbf{Motz}} \text{---} \circ_2 \text{---} \circ \text{---} \circ \text{---},$$

$$\text{---} \circ_1 \text{---} \circ \text{---} \equiv_{\mathbf{Motz}} \text{---} \circ_3 \text{---} \circ \text{---},$$

$$\text{---} \circ_1 \text{---} \circ \text{---} \equiv_{\mathbf{Motz}} \text{---} \circ_3 \text{---} \circ \text{---} \circ \text{---}.$$

Poincaré-Birkhoff-Witt bases

Let \mathcal{O} be an operad with presentation (\mathfrak{G}, \equiv) .

Poincaré-Birkhoff-Witt bases

Let \mathcal{O} be an operad with presentation (\mathfrak{G}, \equiv) .

A Poincaré-Birkhoff-Witt basis (PBW basis) of \mathcal{O} w.r.t. (\mathfrak{G}, \equiv) is a set \mathcal{B} of \mathfrak{G} -trees such that for each $[t]_{\equiv} \in \mathbf{F}(\mathfrak{G})/\equiv$, there exists a unique $s \in \mathcal{B}$ such that $s \in [t]_{\equiv}$.

Poincaré-Birkhoff-Witt bases

Let \mathcal{O} be an operad with presentation (\mathfrak{G}, \equiv) .

A **Poincaré-Birkhoff-Witt basis** (PBW basis) of \mathcal{O} w.r.t. (\mathfrak{G}, \equiv) is a set \mathcal{B} of \mathfrak{G} -trees such that for each $[t]_{\equiv} \in \mathbf{F}(\mathfrak{G})/\equiv$, there exists a unique $s \in \mathcal{B}$ such that $s \in [t]_{\equiv}$.

Proposition

Let \mathcal{O} be an operad admitting a presentation (\mathfrak{G}, \equiv) . If

1. \rightarrow is a rewrite rule on $\mathbf{F}(\mathfrak{G})$ generating \equiv as an operad congruence;
2. the rewrite relation \Rightarrow induced by \rightarrow is terminating and confluent;

then the set of the normal forms for \Rightarrow is a PBW basis of \mathcal{O} .

Poincaré-Birkhoff-Witt bases

Let \mathcal{O} be an operad with presentation (\mathfrak{G}, \equiv) .

A **Poincaré-Birkhoff-Witt basis** (PBW basis) of \mathcal{O} w.r.t. (\mathfrak{G}, \equiv) is a set \mathcal{B} of \mathfrak{G} -trees such that for each $[t]_{\equiv} \in \mathbf{F}(\mathfrak{G})/\equiv$, there exists a unique $s \in \mathcal{B}$ such that $s \in [t]_{\equiv}$.

Proposition

Let \mathcal{O} be an operad admitting a presentation (\mathfrak{G}, \equiv) . If

1. \rightarrow is a rewrite rule on $\mathbf{F}(\mathfrak{G})$ generating \equiv as an operad congruence;
2. the rewrite relation \Rightarrow induced by \rightarrow is terminating and confluent;

then the set of the normal forms for \Rightarrow is a PBW basis of \mathcal{O} .

Such a PBW basis of \mathcal{O} can be described as the set of the trees **avoiding the trees** appearing as left members for \rightarrow .

PBW basis of Motz

Let \rightarrow be the **rewrite rule** on $\mathbf{F}(\mathfrak{G}_{\text{Motz}})$ defined by

$$\circ \circ \circ_1 \circ \circ \rightarrow \circ \circ \circ_2 \circ \circ,$$

$$\circ \circ \circ_1 \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \rightarrow \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \circ_3 \circ \circ,$$

$$\begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \circ_1 \circ \circ \rightarrow \circ \circ \circ_2 \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array},$$

$$\begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \circ_1 \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \rightarrow \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array} \circ_3 \begin{array}{c} \circ \\ \diagup \quad \diagdown \\ \circ \quad \circ \end{array}.$$

This rewrite rule can be seen as an **orientation** of \equiv_{Motz} .

PBW basis of Motz

Let \rightarrow be the **rewrite rule** on $\mathbf{F}(\mathfrak{G}_{\text{Motz}})$ defined by

$$\begin{array}{ll}
 \text{---} \circ_1 \text{---} \rightarrow \text{---} \circ_2 \text{---}, & \text{---} \circ_1 \begin{array}{c} \text{---} \\ \text{---} \end{array} \rightarrow \begin{array}{c} \text{---} \\ \text{---} \end{array} \circ_3 \text{---}, \\
 \begin{array}{c} \text{---} \\ \text{---} \end{array} \circ_1 \text{---} \rightarrow \text{---} \circ_2 \begin{array}{c} \text{---} \\ \text{---} \end{array}, & \begin{array}{c} \text{---} \\ \text{---} \end{array} \circ_1 \begin{array}{c} \text{---} \\ \text{---} \end{array} \rightarrow \begin{array}{c} \text{---} \\ \text{---} \end{array} \circ_3 \begin{array}{c} \text{---} \\ \text{---} \end{array}.
 \end{array}$$

This rewrite rule can be seen as an **orientation** of \equiv_{Motz} .

The induced rewrite relation \Rightarrow is terminating, confluent, and its normal forms are in one-to-one correspondence with Motzkin paths.

PBW basis of Motz

Let \rightarrow be the **rewrite rule** on $\mathbf{F}(\mathfrak{G}_{\text{Motz}})$ defined by

$$\begin{aligned} \circ\circ \circ_1 \circ\circ &\rightarrow \circ\circ \circ_2 \circ\circ, & \circ\circ \circ_1 \begin{array}{c} \circ \\ \circ \circ \end{array} &\rightarrow \begin{array}{c} \circ \\ \circ \circ \end{array} \circ_3 \circ\circ, \\ \begin{array}{c} \circ \\ \circ \circ \end{array} \circ_1 \circ\circ &\rightarrow \circ\circ \circ_2 \begin{array}{c} \circ \\ \circ \circ \end{array}, & \begin{array}{c} \circ \\ \circ \circ \end{array} \circ_1 \begin{array}{c} \circ \\ \circ \circ \end{array} &\rightarrow \begin{array}{c} \circ \\ \circ \circ \end{array} \circ_3 \begin{array}{c} \circ \\ \circ \circ \end{array}. \end{aligned}$$

This rewrite rule can be seen as an **orientation** of \equiv_{Motz} .

The induced rewrite relation \Rightarrow is terminating, confluent, and its normal forms are in one-to-one correspondence with Motzkin paths.

Example

A normal form for \Rightarrow and the Motzkin path in correspondence with it:

An operad on cyclic paths

For any $\ell \geq 1$, let $\ell\mathbf{CPaths}$ be the operad wherein:

- $\ell\mathbf{CPaths}(n)$ is the set of all **paths** with n points having height smaller than ℓ , that are words $u_1 \dots u_n$ of elements of $\{0, \dots, \ell - 1\}$.

Example

is the path 1212202100112 of $3\mathbf{CPaths}$.

An operad on cyclic paths

For any $\ell \geq 1$, let $\ell\mathbf{CPaths}$ be the operad wherein:

- $\ell\mathbf{CPaths}(n)$ is the set of all **paths** with n points having height smaller than ℓ , that are words $u_1 \dots u_n$ of elements of $\{0, \dots, \ell - 1\}$.

Example

is the path 1212202100112 of 3**C**Paths.

- The partial composition $u \circ_i v$ is computed by replacing the i th point of u by a copy of v , and by fitting the obtained path on the cylinder.

Example

In **3CPaths**,

$$011\mathbf{2}02101 \circ_4 10221 = 011(32443)_{\%_3} 02101 = 0110211002101$$

An operad on cyclic paths

For any $\ell \geq 1$, let $\ell\mathbf{CPaths}$ be the operad wherein:

- $\ell\mathbf{CPaths}(n)$ is the set of all **paths** with n points having height smaller than ℓ , that are words $u_1 \dots u_n$ of elements of $\{0, \dots, \ell - 1\}$.

Example

is the path 1212202100112 of 3**C**Paths.

- The partial composition $u \circ_i v$ is computed by replacing the i th point of u by a copy of v , and by fitting the obtained path on the cylinder.

Example

In **3CPaths**,

- The unit is \circ .

A suboperad on directed animals

Let **DA** be the suboperad of **3CPaths** generated by

$$\mathfrak{G}_{\text{DA}} := \left\{ \begin{array}{c} \square \\ \square \\ \square \\ \circ \end{array}, \begin{array}{c} \square \\ \square \\ \square \\ \circ - \circ \end{array} \right\}.$$

A suboperad on directed animals

Let **DA** be the suboperad of **3CPaths** generated by

$$\mathfrak{G}_{\mathbf{DA}} := \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}.$$

Example

The elements of **DA**(4) are

A suboperad on directed animals

Let **DA** be the suboperad of **3CPaths** generated by

$$\mathfrak{G}_{\mathbf{DA}} := \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}.$$

Example

The elements of **DA**(4) are

Proposition

For any $n \geq 1$, **DA**(n) is in one-to-one correspondence with the set of directed animals of size n .

Presentation and PBW basis of DA

Proposition

DA admits the presentation $(\mathfrak{G}_{\mathbf{DA}}, \equiv)$ where $\equiv_{\mathbf{DA}}$ is the smallest congruence of $\mathbf{F}(\mathfrak{G}_{\mathbf{DA}})$ satisfying

$$\begin{aligned} \text{Diagram 1} \circ_1 \text{Diagram 2} &\equiv_{\mathbf{DA}} \text{Diagram 3} \circ_2 \text{Diagram 4}, & \text{Diagram 5} \circ_1 \text{Diagram 6} &\equiv_{\mathbf{DA}} \text{Diagram 7} \circ_2 \text{Diagram 8}, & \text{Diagram 9} \circ_1 \text{Diagram 10} &\equiv_{\mathbf{DA}} \text{Diagram 11} \circ_2 \text{Diagram 12}, \\ \left(\text{Diagram 1} \circ_1 \text{Diagram 2} \right) \circ_2 \text{Diagram 3} &\equiv_{\mathbf{DA}} \left(\text{Diagram 1} \circ_2 \text{Diagram 2} \right) \circ_3 \text{Diagram 3}. \end{aligned}$$

Presentation and PBW basis of DA

Proposition

DA admits the presentation $(\mathfrak{G}_{\text{DA}}, \equiv)$ where \equiv_{DA} is the smallest congruence of **F** (\mathfrak{G}_{DA}) satisfying

$$\begin{aligned} \text{Diagram 1} \circ_1 \text{Diagram 2} &\equiv_{\mathbf{DA}} \text{Diagram 3}, \quad \text{Diagram 4} \circ_1 \text{Diagram 5} \equiv_{\mathbf{DA}} \text{Diagram 6}, \quad \text{Diagram 7} \circ_1 \text{Diagram 8} \equiv_{\mathbf{DA}} \text{Diagram 9}, \\ \left(\text{Diagram 1} \circ_1 \text{Diagram 2} \right) \circ_2 \text{Diagram 3} &\equiv_{\mathbf{DA}} \left(\text{Diagram 4} \circ_2 \text{Diagram 5} \right) \circ_3 \text{Diagram 6}. \end{aligned}$$

Let \rightarrow be the orientation of $\equiv_{\mathbf{DA}}$ satisfying

$$\begin{aligned} & \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_1 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \rightarrow \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_2 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array}, & \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_1 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \rightarrow \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_2 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array}, & \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_2 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \rightarrow \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_1 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array}, \\ & \left(\begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_2 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \right) \circ_3 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \rightarrow \left(\begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \circ_1 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array} \right) \circ_2 \begin{array}{c} \text{ } \\ \text{ } \\ \text{ } \\ \text{ } \end{array}. \end{aligned}$$

Presentation and PBW basis of DA

Proposition

DA admits the presentation $(\mathfrak{G}_{\mathbf{DA}}, \equiv)$ where $\equiv_{\mathbf{DA}}$ is the smallest congruence of **F** ($\mathfrak{G}_{\mathbf{DA}}$) satisfying

2. establish a presentation (\mathfrak{G}, \equiv) of \mathcal{O} ;
3. deduce a PBW of \mathcal{O} w.r.t. (\mathfrak{G}, \equiv) , described as the trees avoiding a certain set \mathcal{P} of patterns;
4. compute $\mathbf{f}(\mathcal{P})$ by using tree series and their operations.

Application to enumeration

Let \mathcal{S} be a combinatorial set we are searching a **generating series**.

Then, we successively

1. endow \mathcal{S} with an operad structure \mathcal{O} ;
2. establish a presentation (\mathfrak{G}, \equiv) of \mathcal{O} ;
3. deduce a PBW of \mathcal{O} w.r.t. (\mathfrak{G}, \equiv) , described as the trees avoiding a certain set \mathcal{P} of patterns;
4. compute $\mathbf{f}(\mathcal{P})$ by using tree series and their operations.

Finally, $\text{ev}(\mathbf{f}(\mathcal{P}))$ is the Hilbert series of \mathcal{O} and the generating series of \mathcal{S} .

Hilbert series of m Dyck

The set \mathcal{B} of the $\mathfrak{G}_{m\text{Dyck}}$ -trees avoiding

$$\mathcal{P} := \{\mathfrak{g}_m \circ_1 \mathfrak{g}_m\}$$

is a PBW basis of m Dyck.

The characteristic series of \mathcal{B} is $\mathbf{f}(\mathcal{P}, \emptyset)$ where

$$\mathbf{f}(\mathcal{P}, \emptyset) = 1 + \mathfrak{g}_m \bar{\circ} \left[\mathbf{f}(\mathcal{P}, \{\mathfrak{g}_m\}), \underbrace{\mathbf{f}(\mathcal{P}, \emptyset), \dots, \mathbf{f}(\mathcal{P}, \emptyset)}_{m+1} \right],$$

$$\mathbf{f}(\mathcal{P}, \{\mathfrak{g}_m\}) = 1.$$

By setting $\mathcal{H}(t) := \text{ev}(\mathbf{f}(\mathcal{P}, \emptyset))$, the Hilbert series $\mathcal{H}(t)$ of m Dyck satisfies

$$t - \mathcal{H}(t) + t\mathcal{H}(t)^{m+1} = 0.$$

Hilbert series of **Motz**

The set \mathcal{B} of the $\mathfrak{G}_{\mathbf{Motz}}$ -trees avoiding

$$\mathcal{P} := \left\{ \circ\circ \circ_1 \circ\circ, \circ\circ \circ_1 \begin{array}{c} \square \\ \square \end{array} \circ, \begin{array}{c} \square \\ \square \end{array} \circ_1 \circ\circ, \begin{array}{c} \square \\ \square \end{array} \circ_1 \begin{array}{c} \square \\ \square \end{array} \circ \right\}$$

is a PBW basis of **Motz**.

The characteristic series of \mathcal{B} is $\mathbf{f}(\mathcal{P}, \emptyset)$ where

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \circ\circ \bar{\circ} \left[\mathbf{f}(\mathcal{P}, \{\circ\circ, \begin{array}{c} \square \\ \square \end{array} \circ\}) , \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \begin{array}{c} \square \\ \square \end{array} \bar{\circ} \left[\mathbf{f}(\mathcal{P}, \{\circ\circ, \begin{array}{c} \square \\ \square \end{array} \circ\}) , \mathbf{f}(\mathcal{P}, \emptyset) , \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ \mathbf{f}(\mathcal{P}, \{\circ\circ, \begin{array}{c} \square \\ \square \end{array} \circ\}) &= 1. \end{aligned}$$

By setting $\mathcal{H}(t) := \text{ev}(\mathbf{f}(\mathcal{P}, \emptyset))$, the Hilbert series $\mathcal{H}(t)$ of **Motz** satisfies

$$t - (t-1)\mathcal{H}(t) + t\mathcal{H}(t)^2 = 0.$$

Hilbert series of \mathbf{DA}

The set \mathcal{B} of the $\mathfrak{S}_{\mathbf{DA}}$ -trees avoiding

$$\mathcal{P} := \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_1 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_1 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array}, \left(\begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) \circ_3 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}$$

is a PBW basis of \mathbf{DA} .

The characteristic series of \mathcal{B} is $\mathbf{f}(\mathcal{P}, \emptyset)$ where

$$\begin{aligned} \mathbf{f}(\mathcal{P}, \emptyset) &= 1 + \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \bar{\circ} \left[\mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\} \right), \mathbf{f}(\mathcal{P}, \emptyset) \right] \\ &\quad + \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \bar{\circ} \left[\mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\} \right), \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) \right], \\ \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\} \right) &= 1 + \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \bar{\circ} \left[\mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\} \right), \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) \right], \\ \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) &= 1 + \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \bar{\circ} \left[\mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\} \right), \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) \right], \\ \mathbf{f} \left(\mathcal{P}, \left\{ \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right\}, \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \circ_2 \begin{array}{|c|} \hline \square \\ \hline \circ \circ \\ \hline \end{array} \right) &= 1. \end{aligned}$$

By setting $\mathcal{H}(t) := \text{ev}(\mathbf{f}(\mathcal{P}, \emptyset))$, the Hilbert series $\mathcal{H}(t)$ of \mathbf{DA} satisfies

$$t - (3t - 1)\mathcal{H}(t) + (3t - 1)\mathcal{H}(t)^2 = 0.$$
